Instructions: Popup Question

Resource name	Popup Question
Description	This resource allows you to create a puzzle in which participants are shown a piece of content (an image or an embedded web page) with a popup overlaid on top of it. The popup contains one or more questions that participants must answer correctly to solve the puzzle.
Usage requirements	None.
Settings	
Skin	This setting allows you to select the appearance of the resource. It can take the following values: "Standard", "Retro" or "Futuristic".
Background	This setting allows you to change the default background of the resource. You can enter the URL of any image from your resource catalog.
Action after solving	This setting allows you to select the action that will be carried out after the puzzle is solved. It can take the following values:

None	
Show message	If this action is selected, a message will be shown to participants when they enter the correct sequence. The message can be customized using the "Message" setting.

Content Area	
Content Type	This setting allows you to select the type of content that will be displayed behind the popup. It can take the following values: - **Image**: the content will be displayed as an image. - **Iframe**: the content will be embedded as an iframe (typically used to display an HTML page).
Content URL	This setting allows you to specify the URL of the content. You can enter the URL of any image from your resource catalog when "Content type" is set to "Image", or the URL of any web page when it is set to "Iframe".
Content position	This section allows you to control the position and size of the content within the resource area. It is composed of four settings, each expressed as a percentage between 0% and 100%: ● Top: vertical offset of the content from the top edge of the puzzle area. ● Left: horizontal offset of the content from the left edge of the puzzle area. ● Width: width of the content as a percentage of the puzzle area width. ● Height: height of the content as a percentage of the puzzle area height.
Popup Settings	
Popup position	This setting allows you to select the corner of the resource area in which the popup will be anchored. It can take the following values: "Top Left", "Top Right", "Bottom Left" or "Bottom Right".
Popup width (px)	This setting allows you to specify the width of the popup in pixels. It must be a value between 200 and 800.
Popup title	This setting allows you to specify the title that will be displayed at the top of the popup.
Allow minimize	This setting allows you to control whether participants can minimize the popup so that the content behind it can be inspected without obstruction.
Questions	In this section you must define every question that will be displayed inside the popup. Questions are presented in the same order in which they are defined here, and the order is also used to build the solution (see the "Solution" section below). You can add as many questions as you need (up to a maximum of 10) using the "Add question" button, and remove questions using the delete icon. At least one question is required. For each question, you must specify:
Question text	The text of the question that will be shown to participants.
Input type	The type of field used to collect the answer. It can take the following values: - Text: a free-form text field. - Numeric: a numeric field that only accepts numbers. - Select (dropdown): a dropdown list of predefined options.
Placeholder	Only used when "Input type" is "Text" or "Numeric". It allows you to specify a placeholder shown inside the input field while it is empty.
Options	Only used when "Input type" is "Select (dropdown)". It allows you to define the list of options that participants will be able to choose from. You must specify one option per line, using either of the following formats: - **value|label:** the participant sees the label in the dropdown, but the value submitted is value. - **value**: the same string is used as both the value and the label.

Button Texts	
Submit button text	This setting allows you to customize the label of the button that participants press to submit their answers.
Continue button text	This setting allows you to customize the label of the button that participants press to continue after the puzzle has been solved.
Error message	This setting allows you to customize the message shown to participants when they submit incorrect answers.
Button color	This setting allows you to customize the color of the popup buttons. You can enter any valid color by its official name or hex code (for example, purple or #ff0000).
Solution	You must link this resource to an escape room puzzle and specify a solution for that puzzle using the following format: **A1;A2;...;An** where `Ai` is the correct answer to the i-th question, in the same order in which the questions are defined in the "Questions" section. Answers are separated by semicolons (`;`) and are compared after trimming leading and trailing whitespace. The format of each `Ai` depends on the input type of the corresponding question: - • For *Text* input, `Ai` must be the exact text expected as the answer. • For *Numeric* input, `Ai` must be the number expected as the answer. • For *Select (dropdown)* input, `Ai` must be the **value** of the option that participants must select (the part before the `|` when using the `value|label` format), not its label. For example, if you have defined three questions where the first expects the text answer "rome", the second expects the numeric answer "42" and the third is a dropdown whose correct option has value "blue", the following solution must be specified: *rome;42;blue* To solve the puzzle, participants must answer every question correctly.
