

Instructions: Drag and Drop Classification

Resource name	Drag and Drop Classification
Description	This resource allows you to create a classification puzzle in which participants must drag a set of images and drop each one into one of two categories. The puzzle is solved when all the images have been placed in their correct category.
Usage requirements	None.
Customization	
Skin	This setting allows you to select the appearance of the resource. It can take the following values: "Standard", "Retro" or "Futuristic".
Background	This setting allows you to change the default background of the resource. You can enter the URL of any image from your resource catalog.
Left title	Title of the category on the left.
Right title	Title of the category on the right.
Confirmation text	Text of the button that the users have to click to check if their classification is correct.
Images	In this section you must define every image (through an URL) or word (through a title) to be classified. For the image field, you can enter the URL of any image from your resource catalog.

Solution	The solution must be a string that represents the correct classification of items into the left and right categories, with no spaces. The solution format is: leftImageIds;rightImageIds Where: - leftImageIds are the IDs of items that should be classified in the left category, sorted numerically and joined with underscores (_). - rightImageIds are the IDs of items that should be classified in the right category, sorted numerically and joined with underscores (_). - The two parts are separated by a semicolon (;) The identifier (ID) of each item is its position in the creation form (e.g., the first item has ID 1 and the second item has ID 2). For example, if you have defined 6 items with IDs 1, 2, 3, 4, 5, 6 and you want participants to: - Classify items 1, 3, and 5 in the left category. - Classify items 2, 4, and 6 in the right category. The solution must be specified as: 1_3_5;2_4_6 To solve the puzzle, participants must drag and drop every item into the correct category as defined by the solution string, then click the confirmation button.
