

Instructions: Video

Resource name	Video
Description	This resource allows you to create a puzzle whose solution requires participants to watch a specific video.
Usage requirements	None.
Settings	
Video	In this setting, you must specify the URL of the video that participants must watch to solve the puzzle. You can enter the URL of any video in an HTML5-compatible format from your resource catalog.
Poster	This setting allows you to specify a cover image for the video, which will be shown before it starts playing. You can enter the URL of any image from your resource catalog. If you do not specify this setting, the first frame of the video or a background will be shown, depending on the web browser used.
Autoplay	This setting allows you to specify whether the video will play automatically, provided that the web browser allows it.
Autoscroll	This setting allows you to specify whether the web page will automatically scroll to the video when it loads.
Show controls	This setting allows you to specify whether the native controls of the web browser's video player will be displayed. These controls allow users to play and pause the video, change the volume, and perform other browser-dependent actions (e.g., switching the video to full screen, downloading the video, or changing the playback speed). If this setting is not enabled, a button will always be shown to allow participants to start playing the video.
Show play button	This setting allows you to specify whether a button to start playing the video will be displayed. If the "Show controls" setting is disabled, this setting will always be enabled automatically.

Allow skipping video	If this setting is enabled, a button will be displayed that allows participants to solve the puzzle without having to watch the entire video.
Skip video button label	This setting allows you to customize the text of the button that is shown to participants when the “Allow skipping video” setting is enabled.
Background	This setting allows you to change the default background of the resource. You can enter the URL of any image from your resource catalog.
Solution	You must link this resource to an escape room puzzle and specify, as the solution for that puzzle, the URL of the video that participants must watch to solve it, that is, the URL specified in the “Video” setting.
