Instructions: Digital Classifier

Resource name	Digital Classifier
Description	This resource allows you to create a puzzle in which participants are shown a series of items, one at a time, on a tablet-style interface. For each item, participants must decide whether it should be approved or rejected. Once they have classified every item, they submit their decisions and the puzzle is solved if every item has been classified correctly.
Usage requirements	None.
Settings	
Background	This setting allows you to change the default background of the resource. You can enter the URL of any image from your resource catalog.
OK button text	This setting allows you to customize the label of the button that participants press to approve an item.
NOK button text	This setting allows you to customize the label of the button that participants press to dismiss an item.
Check button text	This setting allows you to customize the label of the button that participants press to submit their classification once every item has been classified.
Disabled button text	This setting allows you to customize the text that the check button shows while it is still disabled — that is, while there are still items left to classify.
Retry message	This setting allows you to customize the message that is shown to participants when their classification is incorrect, prompting them to try again.
Congratulations message	This setting allows you to customize the message that is shown to participants when they correctly classify every item.
Modal header	This setting allows you to customize the title of the introductory modal that is shown to participants before they begin classifying items.

Modal content	This setting allows you to customize the introductory text that is shown inside the introductory modal, below the title.
Instructions title	This setting allows you to customize the heading that introduces the list of step-by-step instructions inside the introductory modal.
Instruction 1	This setting allows you to customize the first step of the instructions listed in the introductory modal.
Instruction 2	This setting allows you to customize the second step of the instructions listed in the introductory modal.
Modal header 2	This setting allows you to customize the title of the second section of the introductory modal, used to introduce the review/summary part of the modal.
Items	In this section you must define every item that will be shown to participants for classification. Items are presented in the same order in which they are defined here, and the order is also used to build the solution (see the "Solution" section below). You can add as many items as you need (up to a maximum of 50) using the "Add item" button, and remove items using the delete icon.
Solution	You must link this resource to an escape room puzzle and specify a solution for that puzzle. The solution must be a string of digits made up of 1s and 0s, with no separators, where each digit represents the correct decision for one item: - 1 indicates that the item must be **approved**. - 0 indicates that the item must be **rejected**. The string must contain exactly one digit per item, and the digits must appear in the same order as the items are listed in the "Items" section: the first digit corresponds to the first item, the second digit to the second item, and so on. For example, if you have defined four items and you want participants to approve the first and the third item and reject the second and the fourth, the following solution must be specified: *1010* To solve the puzzle, participants must classify every item exactly as defined by the solution string.
